

Mathematics – Percentages

What do I need to be able to do?

- Convert between fractions, decimals and percentages
- Calculate percentages of amounts without a calculator
- Calculate percentages of amounts with a calculator
- Increase and decrease amounts by percentages
- Use multipliers to increase and decrease amounts by percentages
- Write one amount as a percentage of another, with and without a calculator
- Calculate the percentage change
- Find the original amount
- Find the original amount given the new amount – reverse percentages

Keywords:

- Percent:** parts per 100 – written using the % symbol.
- Decimal:** a number in our base 10 number system. Numbers to the right of the decimal place are called decimals.
- Fraction:** a fraction represents how many parts of a whole value you have.
- Equivalent:** of equal value. Reduce: to make smaller in value.
- Growth:** to increase/ to grow.
- Integer:** whole number, can be positive, negative or zero.
- Invest:** use money with the goal of it increasing in value

Percentage decrease: Multipliers

$100\% - 58\% = 42\%$
 $100 - 0.58 = 0.42$ ← Multiplier Less than 1

Convert FDP < and > 100%

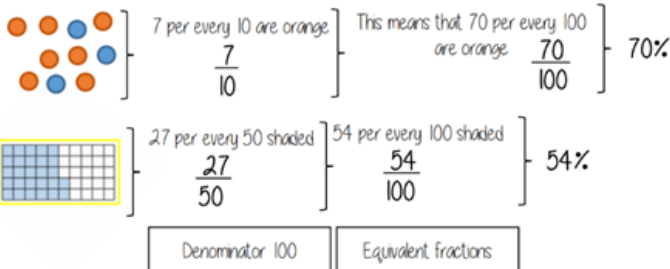

$100\% + 40\%$
 $1 + 0.40$
 $= 1.40$

Percentage increase: Multipliers

$100\% + 12\% = 112\%$
 $100 + 0.12 = 1.12$ ← Multiplier More than 1

Express as a % - Non-calculator Percent – per hundred

Express as a % - Calculator

Percentage change

$\frac{\text{Difference in value}}{\text{Original value}} \times 100$

Choose appropriate method

The language and wording of the question is the key

Have you represented the question in a bar model?
 Can you use a calculator?

What do I need to be able to do?

- Calculate the perimeter of a shape
- Calculate the area of rectangles
- Calculate the area of triangles
- Calculate the area of compound shapes made from rectangles and triangles
- Calculate the area of: a parallelogram, a trapezium, a circle with & without a calculator
- the circumference of a circle without a calculator
- the circumference of a circle with a calculator
- areas of more complex compound shapes, involving parts of circles
- the area of sectors

Keywords:

- **Perimeter:** the distance around a shape
- **Area:** the space contained within the perimeter
- **Rectangle:** a quadrilateral with two pairs of equal sides and four right angles
- **Triangle:** three sided shape
- **Parallelogram:** a quadrilateral with two pairs of equal sides and angles
- **Trapezium:** a quadrilateral with one pair of parallel sides
- **Circumference:** the distance around a circle
- **Diameter:** distance across circle through the centre
- **Radius:** distance from the circumference to the centre
- **Pi:** value for area & circumference formulae = 3.14
- **Sector:** a fraction of a circle cut from the centre

Find the perimeter of a shape:

Add up the distances around a shape.

$$P = 5 + 2 + 5 + 2$$

$$P = 14\text{cm}$$

Find the area of a rectangle:

Area = length x width

$$A = 5 \times 2$$

$$A = 10\text{cm}^2$$

Find the area of a parallelogram:

Area = base x vertical height

$$\text{Area} = 25 \times 2.5 = 62.5\text{cm}^2$$

Find the area of a triangle:

Area = $\frac{\text{base} \times \text{vertical height}}{2}$

$$b = 10$$

$$h = 4$$

$$A = \frac{10 \times 4}{2}$$

$$A = 20\text{cm}^2$$

Find the area of a trapezium: a and b are the

Area = $\frac{(a + b) \times \text{vertical height}}{2}$

$$a = 6$$

$$b = 10$$

$$h = 3$$

$$A = \frac{(6 + 10) \times 3}{2}$$

$$A = \frac{16 \times 3}{2}$$

$$A = 24\text{cm}^2$$

Find the area of a compound shape:

Break into rectangles and/or triangles.

Calculate the area of these shapes.

Add them together.

$$\begin{aligned} \text{Area Triangle} &= \frac{(6 \times 3)}{2} & \text{Area Rectangle} &= 6 \times 4 = 24\text{cm}^2 \\ &= 9\text{cm}^2 & \text{Total Area} &= 9 + 24 = 33\text{cm}^2 \end{aligned}$$

Find the area and circumference of circles:

$$R = 7.5\text{cm}$$

$$\text{Area} = \pi r^2$$

$$\text{Area} = 3.14 \times 7.5^2 = 176.6\text{cm}^2$$

$$D = 15\text{cm}$$

$$\text{Circumference} = \pi D$$

$$\text{Circumference} = 3.14 \times 15 = 47.1\text{cm}$$

Area of complex shapes, involving circles:

Break into shapes you can calculate the area.

Work out the area of these shapes.

Add the areas:

Calculate the area.

Rectangle: Semi-circle: $r = 32\text{m}$

$$A = 64 \times 150 \quad A = (\pi r^2) \div 2$$

$$A = 9,600\text{m}^2 \quad A = \pi \times 32^2 \div 2$$

$$A = 1,608.5\text{m}^2$$

$$\text{Total Area} = 9,600 + 1,608.5 + 1,608.5$$

$$\text{Total Area} = 12,817.0\text{m}^2$$

Area of a sector:

$$\text{Area} = \frac{\text{angle of sector}}{360} \times \text{radius}^2$$

$$360$$

Calculate the area of the sector

$$\text{Radius} = 50\text{cm}$$

$$\text{Angle} = 70^\circ$$

$$\text{Area} = \frac{70}{360} \times 50^2$$

$$360$$

$$\text{Area} = 486.1\text{cm}^2$$

Notes:
